Z CAM	Z CAM E2	M3C-LANC	M3C-LANC	-	✓	-	-	-	✓	-	-		
Note	* Indicates that the Canon DSLR camera is recommended to take the camera in MF mode. If the camera is shot in AF mode, there will be a low probability of focus failure and jam.												
	If power supply setting is turned off in the Sony camera's internal settings but the gimbal still supplies power to the camera. Please switch the cable selection (Multi ↔ Multi/C) on the gimbal to switch whether or not to power the camera.												
	Both M3C-Micro cable or M3C-Multi/C cable, when connecting the camera, if it appears "please check the connected device". Please restart the stabilizer and reconnect it once again.												
	These three Sony models can achieve electronic focus: Alpha 7 III, Alpha 7R III, Alpha 6400. If you can't make electronic focus, you can try the lens to be in AF mode, but the camera needs to be set to MF mode.												
The M3C-CP and M3C-LANC control cables are optional, you can purchase those cables from https://store.gudsen.com/

Note:

1. Due to the variety of lens, the following lens parameters and test data are for reference only.

2. The measured data of the following camera with lens does not apply to any riser plate or counterweight.

3. Due to the limited test lens set, most lenses not listed can be assembled and balanced as long as the dimensions meet the following recommendations.

4. The information in the lens compatibility table will be continuously updated after testing is completed. Other lenses not listed in the table may be compatible if mechanical balance can be achieved on the MOZA AirCross 2.
